```

pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Surface proteins on a phagemid or secreted as free scry by
Escherichia coli, the HID scFv clones are capable of inhibiting
Yon Willebrand factor-dependent aggregation of platelets. The scFv
Care composed of native human protein sequences and are therefore
attractive potential reagents for therapeutic purposes. They
provide a new class of antithrombotic agents, useful for the
prevention of platelet-dependent thrombi in diseased arteries,
bypass grafts, dialysis etc., and can also be used as diagnostic
reagents. Methods of inhibiting aggregation of platelets, of
binding human platelet GPPb alpha and of selecting a VH or VL
region of an antibody that inhibits platelet aggregation are
claimed. Fragments of the scFv VH or VL chain, including CDR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AAG65303;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AAG65303 standard; protein; 7 AA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 attractive potential reagents for therapeutic purposes. They provide a new class of antithrombotic agents, useful for the prevention of platelet-dependent thrombo in diseased arteries, bypass grafts, dialysis etc., and can also be used as diagnostic reagents. Methods of inhibiting aggregation of platelets, of binding human platelet GPTb alpha and of selecting a VH or VL region of an antibody that inhibits platelet aggregation are claimed. Fragments of the scFV VH or VL chain, including CDR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          2 (CDR2) of the light chain variable region (VL) of human single chain antibody (scFv) HIb-3 (see AAY95219), which is directed against platelet glycoprotein Ib (GPIb). The HIb series of scFv was isolated from a human synthettic VH and VL scFv library on the basis of their binding to platelet GPIb. Whether displayed as surface proteins on a phagemid or secreted as free scFv by Escherichia coli, the HIb scFv clones are capable of inhibiting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        fragments, are also claimed.

The DNA was used in the prepn. of catalytic antibody (CA) producing bacteriophage. The CAs can be used to activate/deactivate a biological function in an animal by enhancing the rate of cleavage, or formation of a specific bond within a mol. in vivo.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence

PCR was used to prepare a human scFv library from RNA from white blood cells from an unimmunised donor. Heavy chains from IgG and IgM antibodies were amplified separately. Four separate libraries were generated (IgG-K, IgG-lambda, IgM-K and IgM-lambda). The purified scFv fragments were ligated into the phagemid pHEM1 for expression on the surface of fd bacteriophage as gene III fusions.
                                                                                                                                                                                                                                                                                       Producing members of specific binding parecombinant host cells with a secreting

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          generating a library of VH and VL domains from the immunised animal; cloning the VH and VL domains into a phage expression vector to generate phage display antibodies; selecting phage display antibodies which bind specifically to the antigen; screening the selected phage display antibodies for catalytic activity to substrate; and isolating the catalytic antibodies, where the phage expression vector incorporates a histidine peptide in tandem with a myc peptide. The processes are used to produce catalytic antibodies, which can be used for in vivo activation of a prodrug. Sequences AAM95484 489 represent genetic sequences of heavy and light chains of RT3 specific phage antibodies selected from a naive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 19-OCT-1990;

The other was derived from a human VH4 family gene and a human VK1 family gene. One clone bound only to phox:BSA (Oxazolone binder). This sequence revealed a VH derived from a human VH1 family gene (AAR22569) and VL from a human V lambda 1 family gene (AAR22570).

These were designated BSA binders. Thirteen of fourteen clones sequenced had the same sequence, the VH derived from a human VH3

The DNA was used in the prepn. of catalytic antibody (CA) producing bacteriophage. The CAs can be used to activate/deactivate a biological function in an animal by enhancing the rate of cleavage, or formation of a specific bond within a mol. in vivo.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   it in phage vectors
The invention relates to methods for producing catalytic antibodies displayed on a phage. The method comprises: (a) generating a gene library of antibody-derived domains; (b) inserting coding for the dinto a phage expression vector; and (c) isolating the catalytic
                                                                                                  Production of catalytic antibodies displayed on bacteriophages comprises generating a gene library of antibody-derived domains inserting coding into a phage expression vector and isolating t

The processes are used to produce catalytic antibodies, which can be used for in vivo activation of a prodrug. Sequences AAW95484-489 represent genetic sequences of heavy and light chains of RT3 specific phage antibodies selected from a naive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             antibodies. The phage expression vector incorporates a histidine peptide in tandem with a myc peptide. The catalytic antibodies can be isolated by preparing an antigen; optionally immunising an animal with the antigen; generating a library of VH and VL domains from the immunised animal; cloning the VH and VL domains into a phage expression vector to generate phage display antibodies; selecting phage display antibodies which bind the phage display antibodies which bind
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    specifically to the antigen; screening the selected phage display antibodies for catalytic activity to substrate; and isolating the

The antibodies can be used in the treatment of obesity and obesity related diseases. The antibodies can be used to deliver drugs or pro-drugs directly to the fat mass of an obese patient or the antibody can be used as a therapeutic itself. Antibodies binding specifically to by complement mediated lysis. The antibodies binding specifically to by complement mediated lysis. The antibodies may be labeled with a detectable label such as radiolabel, fluorescent or chemical group and used in methods of diagnosis in human subjects e.g. to determine the presence of adipocyte antigen on the surface of an adipocyte to detect or
                                                                                                                                                                                                                                                                              Panel of specific binding members of antibody molecules which bind whole adipocytes is used in the treatment of obesity and obesity related diseases.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            cells. The antibody agglutinates rhesus positive cells but not rhesus negative cells and is useful diagnostically and also for preventing haemolysis in new-born rhesus positive babies. Recombinant IgM-D7C2 can be produced by insect cells which have been transformed by a baculoviral vector comprising a D7C2 expression cassette. The present sequence is that of the variable

                                                                                                                                    AAU02501-AAU02635, and AAU02641-AAU02748 represent the amino acid sequences of anti-adipocyte monoclonal antibody heavy chain, light chain, and heavy chain complementarity determining regions (CDR) of the invention. The antibodies can be used in the treatment of obesity and obesity related diseases. The antibodies can be used to deliver drugs or pro-drugs directly to the fat mass of an obese patient or the antibody can be used as a therapeutic itself. Antibodies binding specifically to adipocytes can be used to activate the immune system to destroy the cells by complement mediated lysis. The antibodies may be labeled with a detectable label such as radiolabel, fluorescent or chemical group and used in methods of diagnosis in human subjects e.g. to determine the
                               presence of adipocyte antigen on the surface of an adipocyte to detect or determine the presence or level of adipocytes in a cell or tissue sample. The antibodies can be used as an alternative means of treatment for obese patients other than undergoing surgery to remove excess fat. Antibodies for different types of fat deposits can also be produced e.g. intra-abdominal fat associated with heart disease.
                                                                                                                                                                                                                                                                                                                                                      Claim 1; Page 112; 182pp; English.

The antibodies can be used as an alternative means of treatment for obese patients other than undergoing surgery to remove excess fat. Antibodies for different types of fat deposits can also be produced e.g. intra-abdominal fat associated with heart disease.

Best Local
      chain genes were cloned and a combinatorial library was prepared and screened to select antigen (HIV rev or tat) binders. Human soluble anti-HIV Fabs were obtained. Heavy chain VH sequences are given in AAR69084-87, light chain VL in AAR69088-92 and light chain AAR69093-97.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           HIV-1; human immunodeficiency virus type 1; AIDS; Tat protein; intracellular immunization; gene therapy; single chain antibody; Fab; antibody engineering; resistance; cell immunity.

                                              antibody 14F12, which is specific for transforming growth factor (TGF) beta-2. It is encoded by a gene (AAF63375) isolated from a light chain shuffle repertoire of a peripheral blood lymphocyte library. The antigen-binding domains of human antibodies (see AAW15522-40) to TGF beta-1 and/or beta-2 can be used to counter the adverse effects of TGF beta, such as (1) promotion of fibrosis (in dermal, ocular or keloid scarring, lung fibrosis, arterial injury, proliferative retinopathy, retinal detachment, adult respiratory distress syndrome, liver cirrhosis, post myocardial infarction,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          screroderma; vascular didease; cataract; glaucoma; scarring; glomerulonephritis; osteoporosis; immune disease; inflammation; rheumatoid arthritis; macrophage deficiency disease; macrophage deficiency disease;

Nucleic acids encoding human antibody VH and VL can be used for prodn. of recombinant antigenbinding domains. These are highly specific, have low dissociation constants (pref. less than 5 nM) and low IC50s for neutralisation.

The method is improved by using a rec gene encoding an antibody (Ab) (e.g. the present sequence) that is selectively specific for an intracellular or halt the progress of a disease. The method is used to prevent or halt the progress of a disease by IC immunisation. Specifically, the Ab can be used to inhibit the replication of a virus, such as human T-cell leukaemia virus or especially HIV-1, or of other pathogens, e.g. bacteria, fungi. The method provides immunity before or after the development of the disease and can be used to control the severity of the disease.

The HID CC series of scFv was isolated from a human synthetic VH and VL scFv CC library by 3 rounds of phagemid selection against transfected CHO CC cells expressing the GPID alpha component of the GPID/IX/V complex CC on their surface, followed by a 4th round of selection against CC washed human platelets, and 2 final rounds in which attempts were CC made to displace scFv from washed platelets by flooding with much monoclonal antibody or mimotope peptide (see AAY9529). CC Whether displayed as surface proteins on a phagemid or secreted CC as free scFv by Escherichia coli, the HID scFv clones are capable CC as free scFv by Escherichia coli, the HID scFv clones are capable CC and are therefore attractive potential reagents for therapeutic CC purposes. They provide a new class of antibrombotic agents, used as diagnostic reagents, Methods of inhibiting aggregation of platelets, of binding human platelet GPID alpha and of selecting CC are claimed.

CC are claimed.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                      pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                  Score
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   seq length:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        30-NOV-2001 (first entry)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                inflammatory disorders (e.g., rheumatoid arthritis), rother's disease, (e.g., Huntington's Chorea, Parkinson's disease, neurological disorders (e.g., Huntington's Chorea, Parkinson's disease, hat stroke), heart failure, myocardial infarction, autoimmune diseases such as autoimmune hepatitis and autoimmune neutropaenia, and mental disorders (e.g., depression and schizophrenia). Treatment with an anti-IL-18 antibody may occur before, concurrent, or after administration of a second agent selected from an antibody, or fragment, capable of binding human IL-12, methotrexate, anti-tumor necrosis factor, corticosteroids, cyclosporin, rapamycin, FK506, and non-steroidal anti-inflammatory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAG65309 standard; protein; 109 AA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention provides isolated antibodies, or antigen-binding portions, that are capable of binding to human interleukin-18 (IL-18). The antibodies may be used to inhibit human IL-18 activity in, and treat a disorder where IL-18 is detrimental than a number of the subject suffering from,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             chain CDR3

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CC The invention provides isolated antibodies, or antigen-binding portions, CC that are capable of binding to human interleukin-18 (II-18). The CC antibodies may be used to inhibit human II-18 activity in, and treat a CC disorder where II-18 is detrimental in, a human subject suffering from, CC inflammatory disorders (e.g., rheumatold arthritis, Crohn's disease, and costcoarthritis), neurological disorders (e.g., huntington's chorea, parkinson's disease, Alzheimer's disease, and CC stroke), heart failure, myocardial infarction, autoimmune diseases such CC (e.g., depression and schizophrenia). Treatment, and mental disorders CC (e.g., depression and schizophrenia). Treatment with an anti-II-18 antibody and occur before, concurrent, or after administration of a CC antibody may occur before, concurrent, or after administration of a CC antibody may occur before, and antibody, or fragment, capable of binding CC unuman II-12, methotrexate, anti-tumor necrosis factor, corticosteroids, cyclosporin, rapamycin, FK506, and non-steroidal anti-Inflammatory CC agents. The present sequence represents an anti-II-18 antibody 2E1 light CC chain sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          second agent selected from an antibody, or fragment, capable of binding human II-12, methotrexate, anti-tumor necrosis factor, corticosteroids, cyclosporin, rapamycin, FK506, and non-steroidal anti-inflammatory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               stroke), heart failure, myocardial infarction, autoimmune diseases such as autoimmune hepatitis and autoimmune neutropaenia, and mental disorders (e.g., depression and schizophrenia). Treatment with an anti-IL-18 antibody may occur before, concurrent, or after administration of a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             disorder where IL-18 is detrimental in, a human subject suffering fr inflammatory disorders (e.g., rheumatoid arthritis, Crohn's disease,
AAG62970-AAG63005 represent complementarity determining region 3 (CDR3) of VL and VH chains of antibodies of the invention. The specification describes a mixture or panel of 5 different specific binding members, each comprising an antibody VH and/or VL variable domain and capable, when displayed on the surface of filamentous bacteriophage particles or in the case of a specific binding member comprising the D5 VH and/or VL variable domain when bound to human serum amyloid protein, to pass through a mammalian blood brain barrier (BBB). The panel is useful for the selection of specific binding members with a desired property such
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         27-NOV-2000; 2000WO-GB04501

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  QУ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAG62974
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   cell antigen, ability to bind areas of inflammation in the brain or BBB breakdown or ability to bind intracellular adhesion molecules and to bit transferrin receptor. The antibodies are useful in diagnosis, prophylaxi and treatment of human or animal body, including neurological diseases, such as Alzheimer's disease, prion disease, AIDS-related dementia, epilepsy and traumatic brain injury and any diseases involving
as ability to cross BBB, ability to bind endothelial cells or other brain cell antigen, ability to bind areas of inflammation in the brain or BBB breakdown or ability to bind intracellular adhesion molecules and to bind transferrin receptor. The antibodies are useful in diagnosis, prophylaxis and treatment of human or animal body, including neurological diseases, such as Alzheimer's disease, prion disease, AIDS-related dementia, epilepsy and traumatic brain injury and any diseases involving
                                                                                                                                         AAG62970-AAG63005 represent complementarity determining region 3 (CDR3) of VL and VH chains of antibodies of the invention. The specification describes a mixture or panel of 5 different specific binding members, each comprising an antibody VH and/or VL variable domain and capable, when displayed on the surface of filamentous bacteriophage particles or in the case of a specific binding member comprising the D5 VH and/or VL variable domain when bound to human serum amyloid protein, to pass through a mammalian blood brain barrier (BBB). The panel is useful for the selection of specific binding members with a desired property such the selection of specific binding members with a desired property.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Antibody; light chain; VL; amyloid protein; blood brain barrier; endothelial cell; brain cell antigen; inflammation; adhesion molecule; transferrin receptor; neurological disease; Alzheimer's disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAG62974 standard; peptide; 11 AA.

cc each comprising an antibody VH and/or VI variable domain and capable, CC when displayed on the surface of filamentous bacteriophage particles or CC in the case of a specific binding member comprising the D5 VH and/or VI variable domain when bound to human serum amyloid protein, to pass CC through a mammalian blood brain barrier (BBB). The panel is useful for CC the selection of specific binding members with a desired property such CC as ability to cross BBB, ability to bind endothelial cells or other brain CC cell antigen, ability to bind areas of inflammation in the brain or BBB breakdown or ability to bind areas of inflammation in the brain or BBB creakdown or ability to bind intracellular adhesion molecules and to bind cand treatment of human or animal body, including neurological disease, such as Alzheimer's disease, prion disease, AIDS-related dementia, CC such as Alzheimer's disease, prion disease, AIDS-related dementia, CC inflammation occurring within the brain or central nervous system.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          RESULT
